What is your project about?
An analysis of how murder rates is influenced by human development index (HDI)

What is the data you plan to use?
https://www.gapminder.org/data/
- Murders per 100k people: Mortality due to interpersonal violence, per 100 000 standard population, age adjusted.
- Human Development Index (HDI): an index used to rank countries by level of "human development"; consists of three dimensions: health level, educational level, and living standard.

Background	Crime and murder exist all over the world, though its prevalence varies across different countries. Why do these differences exist? In this data story, I will attempt to use the Human Development Index (HDI) as a tool to understand why some countries have higher instances of crime and murder than others.
Data	https://www.gapminder.org/data/
Problem Statement	How are murder rates influenced by the human development index?
